

# THE FISH

Artist: Thomas McGuire & Maria Rivera

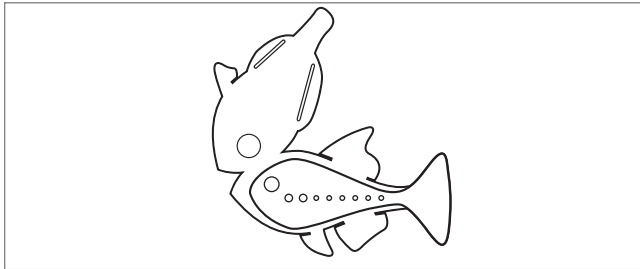

OUTER LAYER

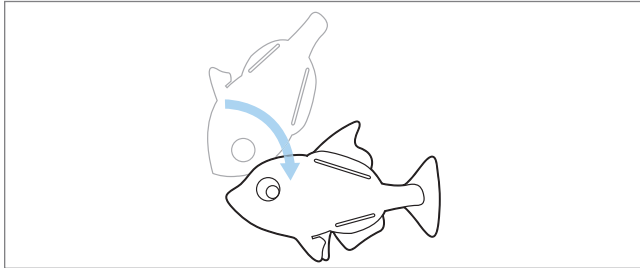

INNER LAYER  
(Skeleton/Tail)

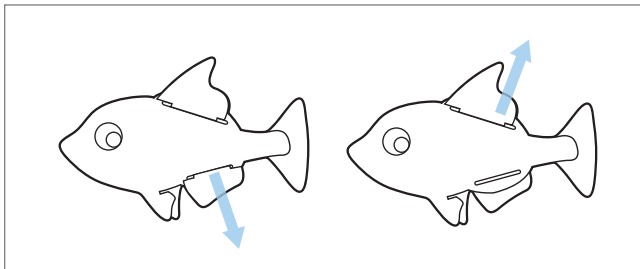

**Your very own fish is just 6 steps away!**

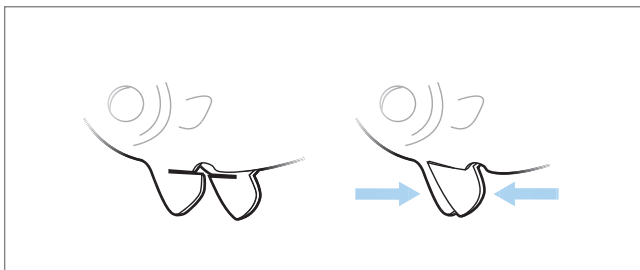

1. Punch out the fish pieces. Clear the slots for the fins and the circles for the eye holes on the outer layer as well as the circles on the inner layer (skeleton/tail).

2. Place the inner layer on one side of the outer layer of the fish, making sure the eyes line up.

3. Fold the second side of the outer layer over the inner layer so that the outer layer covers both sides of the inner layer.

4. Pull the top fin through the top slot of the fish and then the bottom fin through the bottom slot of the fish.

5. Finally, hook the smaller bottom fins together and push out the side fins and gills.

6. Congratulations! You just made your very own fish!
